eSalesTrack

Overview

eServer gives your company the ability to integrate all your back office systems with the leading front-end CRM application. It's the ultimate integration solution. There are several levels of the eServer solution available, this white paper covers the **Enterprise Edition with Database Server**.

eServer Benefits

The eSalesTrack Enterprise Edition eServer with Database Server allows your company the ultimate in CRM integration capability without the hassle of maintaining your own CRM database. Your eServer comes complete and loaded with the proprietary eSalesTrack application software and the database server is fully loaded with the latest release of the eSalesTrack database structure. Your IT department will have full access to the database server to integrate with your organizations other back-office systems easily and efficiently. This is the ultimate "plug-and-play" premise solution that will get your company up and running right away. As with the stand-alone Enterprise Server, the Database solution also comes fully supported by eSalesTrack technicians, who will provide integration support of the eSalesTrack complete premise solution.

Get your organization up and running with the eSalesTrack Enterprise eServer at a fraction of the cost and time that it's takes to implement similar on-premise solutions. Let the eSalesTrack Enterprise eServer start helping your organization today.

Security

The eSalesTrack Enterprise Edition eServer with Database Server gives your internal IT department the ultimate control over security in your own network environment. eSalesTrack mandates a minimum of 1024-bit encryption levels for the hosted appliance. Since the eServer appliance is in your control, the eServer can sit behind your corporate firewall and be in secure control of your internal IT department.
